

The Kaspersky Anti-Virus engine

At the heart of any antivirus program lies its engine – that is, the module responsible for scanning objects and detecting malicious programs. In today's IT environment, where malware can reach epidemic proportions in hours or even minutes, an antivirus engine that is designed to provide the fastest possible response to new threats is essential.

As the leading Antivirus/Anti-Malware OEM developer in the World with over 125 globally recognized solutions, you can trust that your email gateway is better protected than any other solution on the market.

Fastest response to new threats

Today, when viruses and worms can penetrate hundreds of thousands of computers in just a few hours, response time to threats is crucial for effective protection from malware. Kaspersky Lab's proactive technologies are supported by an industry leading signature-based protection that yields accurate and timely detection of malware. Kaspersky Lab's team of virus analysts headed by Eugene Kaspersky, provides the quickest release of emergency updates during virus outbreaks. Kaspersky Antivirus consistently leads the industry's most comprehensive comparisons of response times from organizations such as AV-Test GmbH, an independent project housed at the Otto-von-Guerick University, Magdeburg, Germany.

Tungsten v1.0.0.2

Kaspersky Antivirus/Anti-Malware Plug-in for MailMarshal SMTP/Exchange

Tungsten Antivirus is a high performance gateway antivirus plug-in that outperforms alternative solutions from McAfee, Sophos, and Norman. Offering multi-threaded performance, and advanced threat protection from Viruses, Trojans, Worms, Root Kits, Spyware, Adware, and Malware. Supports all current versions of MailMarshal SMTP and MailMarshal for Exchange.
